

CUMULATIVE INDEX 2001

Volume 19

March	ANESTHESIA FOR MINIMALLY INVASIVE SURGERY, pages 1-205
June	PEDIATRIC EMERGENCIES, pages 207-409
September	THORACIC ANESTHESIA, pages 411-632
December	MONITORING DURING CRITICAL EVENTS, pages 633-987

Note: Page numbers of article and issue titles are in **boldface** type.

- Abdominal compartment syndrome, oliguria in, 877-878
- Abdominal distension, observation for, for verifying endotracheal position, 817
- Abdominal trauma, pediatric, anesthetic management, 330-331
 - overview, 329-330
- Acid-base changes, as complication of massive transfusion, 645
- Acoustic reflectometry, for verifying endotracheal position, 829-830
- Adrenalectomy, laparoscopic, 109
- Air and gas embolism, cause, 685-686
 - intraoperative monitoring strategy, 690-691
 - monitoring and diagnosis, 686-690
- Air leaks, persistent, after thoracoscopy, 194-195
 - in pediatric patient, 197-198
- Airway evaluation, in secondary treatment of anaphylaxis, 714
- Airway maintenance with 100% oxygen, for initial treatment of anaphylaxis, 710
- Airway reconstruction, ventilation for, 532
- Airway surgery, anesthesia for, **497-541**
 - direct laryngoscopy, anesthetic and ventilation techniques, 519-521
 - patient characteristics and physiologic effects, 519
 - emergence after, 534-535
 - extraordinary ventilation strategies, cardiopulmonary bypass, 531
 - hyperbaric oxygenation, 531
 - reconstruction of airway, 532
 - spontaneous ventilation, 531
 - fiberoptic bronchoscopy, anesthetic techniques, general anesthesia, 512-514
 - topical anesthesia with conscious sedation, 511-512
 - patient characteristics and physiologic effects, 510-511
 - high-frequency ventilation, 529-531
 - immediate postoperative complications, 535-536
 - in laryngobronchoscopy, patient positioning and monitoring, 509-510
 - laser resection by way of suspension laryngoscopy or bronchoscopy, 521-523
 - modes of ventilation, 504, 506
 - characteristics of, 505
 - high-frequency jet ventilation, 500-501, 506-507
 - high-frequency oscillation, 502, 507-509
 - high-frequency positive pressure ventilation, 501, 507
 - low-frequency jet ventilation, 498-499, 529
 - removal of foreign bodies, 523
 - rigid bronchoscopy, anesthetic and ventilation techniques, 515-519
 - patient characteristics and physiologic effects, 514-515
 - tracheal resection and reconstruction, anesthesia and ventilation techniques, 526
 - distal tracheal intubation and intermittent positive pressure ventilation, 526-529

Airway surgery (*Continued*)

- patient monitoring, 525-526
 - preoperative assessment and patient characteristics, 524-525
 - tracheostomy, 523-524
 - tracheal surgery with specific anesthetic considerations, airway trauma, 532-533
 - tracheoesophageal fistula, 533-534
 - useful agents, 497, 503-504
 - alfentanil, 503
 - desflurane, 503
 - esmolol, 503
 - fentanyl, 503
 - mivacurium, 504
 - propofol, 503
 - rapacuronium, 504
 - remifentanyl, 503
 - rocuronium, 504
 - sevoflurane, 503
 - succinylcholine, 504
 - jet ventilation and high-frequency ventilation in, 498-502
- Airway trauma, anesthesia for, 532-533
- Alfentanil, for airway surgery, 503
- Almitrine bimesylate, effect of, on hypoxic pulmonary vasoconstriction, during one-lung ventilation, 491-492
- α_1 agonists, pure, for pediatric resuscitation outside operating room, 394
- Aminophylline, for secondary treatment of anaphylaxis, 712-713
- Amniotic fluid embolism, 696-698
- Amrinone, for secondary treatment of anaphylaxis, 713
- Analgesia, postoperative, for pulmonary resection, 425-426
- post-thoracotomy. *See Post-thoracotomy analgesia.*
- Anaphylactoid reactions, pathophysiology of, 707-708
- Anaphylaxis, 705-715
 - from adverse drug reactions, 706
 - pathophysiology of, 706
 - recognition of, during anesthesia, 707
 - treatment of, 708-709
 - initial therapy, 709-711
 - secondary treatment, 711-714
- Anaritide, for improving outcome after oliguria, 875
- Anemic hypoxia, 778-781
 - diagnosis and treatment of, 793-794
- Anencephaly. *See Neural tube defects.*
- Aneurysms, intracranial, genetics of, 230
 - saccular, co-existing with arteriovenous malformations, 229-230
- Aneurysm surgery, thoracoabdominal. *See Thoracoabdominal aneurysm surgery.*
- Anticoagulation, monitoring of, for treatment of pulmonary thromboembolism, 683-685
- Antihistamines, for secondary treatment of anaphylaxis, 711
- Aortic valve, examining with transesophageal echocardiography, 735-737
- Arrests, intraoperative coagulopathy and, 354-355
 - secondary to topical vasoconstrictors, 357-358
- Arrhythmias, intraoperative coagulopathy and, 354-355
 - in patients undergoing pulmonary resection, 420
 - as pediatric cardiac emergency, 292-298
 - complete heart block, 296-298
 - supraventricular tachycardia, 293-296
- Arterial blood gas analysis, before thoracoscopy, 159
- Arterial blood gas and pH analysis, 885-912
 - arterial blood acid-base balance, buffering capacity, 888-889
 - graphic approach to acid-base analysis, 889-891
 - importance of anion gap in acid-base analysis, 891-892
 - metabolic component, 887-888
 - overview, 885-886
 - respiratory component (PCO_2), 887
 - rules-based approach to acid-base analysis, 893
- arterial blood partial pressure of carbon dioxide (PCO_2), alveolar dead space, 901-903
 - anatomic dead space, 901
 - assessment of alveolar ventilation, 900-901
 - carbon dioxide expirogram *versus* capnogram, 903-906
 - comparison of average alveolar expired PCO_2 ($PAECO_2$) with $Paco_2$, 906
 - total physiologic dead space, 901
- arterial blood partial pressure of oxygen (PO_2), assessment of arterial blood oxygenation, 898-900
- oxyhemoglobin dissociation relationship, 896-897
- tissue oxygen consumption *versus* arterial blood oxygen delivery, 897-898
- non-steady-state considerations of blood gas and pH analysis, 907-909
- venous blood and tissue compartments, 907
- Arterial blood pressure, for monitoring air embolism, 689-690
- Arteriovenous malformations, 229-235
 - anesthetic management, 233-234
 - co-existence of saccular aneurysms with, 229-230

- genetics of intracranial aneurysms, 230
- intervention, 233
- occurrence of, 230-231
- order of treatment, 232
- presentation, 231-232
- recurrence of, 231
- Spetzler-Martin System for grading, 231
- treatment modalities, 232
- Aspirated foreign bodies, in children, 239
 - anesthetic management, 240-242
- Atrial natriuretic hormone, for improving outcome after oliguria, 875
- Atropine, for pediatric resuscitation outside operating room, 396
- Auscultation, for confirming double-lumen endotracheal tube placement, 462-463
- Auto-positive end-expiratory pressure, during one-lung ventilation, 443-445
- Axillae, auscultation of, for verifying endotracheal position, 817
- Beck Airway Air Flow Monitor, for verifying endotracheal position, 829
- β -blockers, for prophylaxis of myocardial ischemia, 654-655
- Bicarbonate, for secondary treatment of anaphylaxis, 713
- Bispectral index monitoring, 947-966
 - awareness during, 963-964
 - clinical usefulness trials in surgical patients, 957-960
 - clinical validation in volunteers, 954-956
 - defining components of anesthesia, 950-951
 - future applications, 964
 - historical perspective, 948-949
 - importance of monitoring hypnotic state, 956-957
 - interpretation of bispectral index levels during anesthesia, anesthetic goals, 961-963
 - balanced anesthesia, 960
 - inhalational anesthesia, 961
 - technologic improvements, 949-950
 - theoretic basis, 951-954
 - in thoracic surgery for end-stage lung disease, 583
- Bleeding, intraoperative, during thoracoscopy in pediatric patient, 198
- Blood, fluid, and electrolyte balance in children, intraoperative fluid administration, 340-342
 - preoperative fasting guidelines for, 339-340
- Blood transfusions, in children, allogenic, indications for, 347-348
 - cryoprecipitate, 352-353
 - determining amount of blood for, 348-351
 - fresh frozen plasma, 351
 - homologous, 342
 - infectious risks, 342-344
 - noninfectious complications, 344-347
 - massive, and intraoperative coagulopathy, 351
 - platelets, 351-352
- massive, complications of, 638-647
 - acid-base changes, 645
 - citrate intoxication, 644-645
 - combined dilutional and consumptive coagulopathy, treatment of, 644
 - complex coagulopathies, 642-643
 - consumptive coagulopathy, 640
 - decreases in 2,3-diphosphoglycerate, 645
 - dilutional coagulopathy, 639-642
 - hyperkalemia, 645-646
 - hypothermia, 640-641
 - microaggregate delivery, 646-647
 - volume overload, 646
- Bradycardia, intraoperative coagulopathy and, 356-357
- Breath sounds, auscultation of, for verifying, endotracheal position, 816
 - tracheal tube insertion depth, 833
- Bronchial blocker, in one-lung ventilation, 478
- Bronchoscopy, laser resection by way of, 521-523
 - rigid, anesthetic and ventilation techniques, 515-519
 - patient characteristics and physiologic effects, 514-515
- Calcium, for pediatric resuscitation outside operating room, 394-395
- Calcium channel blockers, for improving outcome after oliguria, 874
- Cancer, lung. *See Lung cancer.*
- Capnography, for monitoring air embolism, 688
 - for verifying, endotracheal position, 821-824
 - tracheal tube insertion depth, 834
- Carbicarb, for pediatric resuscitation outside operating room, 396
- Carbon dioxide, identification of, in exhaled gas, for verifying endotracheal position, 821-825
- Carbon monoxide toxicity, hypoxia from, 782-783
 - diagnosis and treatment of, 794-796
- Carboxyhemoglobin, as artifact of pulse oximetry, 802

- Cardiac arrest and monitoring, 717-726
 assessing adequacy of circulation during cardiopulmonary resuscitation, 721-722
 electrocardiography, 718-719
 end-tidal carbon dioxide monitoring, 723-724
 invasive pressure monitoring, 722-723
 ventricular fibrillation, 719-721
- Cardiac complications, from thoracoscopy, 192
- Cardiac disease, in patients undergoing pulmonary resection, 420
- Cardiac emergencies, pediatric, 287-308
 arrhythmias, 292-296
 complete heart block, anesthetic management, 297-298
 cause, 296-297
 clinical presentation, 297
 supraventricular tachycardia, anesthetic management, 296
 cause, 293-294
 clinical presentation, 294
 medical management, 295-296
 cardiac tamponade, anesthetic management, 300-301
 cause, 298-299
 clinical presentation, 299-300
 congenital cardiac lesions, 287-292
 indications for emergency cardiac catheterization, anesthetic management, 291-292
 inadequate mixing of pulmonary and systemic circulations, 290-291
 obstructive left-sided cardiac lesions, 288-289
 obstructive right-sided cardiac lesions, 289-290
 congestive heart failure, anesthetic management, 304
 cause, 301-302
 clinical presentation, 302-303
 medical management, 303-304
- Cardiac lesions, congenital, as pediatric cardiac emergency, 287-288
 anesthetic management, 291-292
 indications for emergency cardiac catheterization, 288-291
- Cardiac tamponade, as pediatric cardiac emergency, anesthetic management, 300-301
 cause, 298-299
 clinical presentation, 299-300
- Cardiogenic pulmonary edema, in children, 386-387
- Cardiopulmonary bypass, for ventilation in airway surgery, 531
- Cardiopulmonary interaction, in prethoracotomy respiratory assessment, 416-417
- Cardiopulmonary resuscitation, assessing adequacy of circulation during, 721-722
 determining pulselessness before, 717-718
 electrocardiography for monitoring, 718-719
 end-tidal carbon monoxide monitoring during, 723-724
 invasive pressure monitoring during, 722-723
- Cardiovascular collapse, from laparoscopy, 92-93
- Cardiovascular complications, of laparoscopy, 92-94
- Cardiovascular effects, of intra-abdominal pressure, in pediatric laparoscopy, 72-74
 of pneumoperitoneum, in laparoscopy, 2-6
- Catecholamines, for secondary treatment of anaphylaxis, 711-712
- Caudal epidural block, for laparoscopy, 49
- Central pressures, for assessing adequacy of oxygen delivery in massively bleeding patient, 634-635
- Central venous catheter, for monitoring air embolism, 689
- Central venous pressure monitoring, for measuring renal perfusion, 868-869
- Cerebral perfusion pressure, as measure of brain hypoxia and ischemia, 805-806
- Cervical trauma, from hysteroscopy, 134
- Chest movements, observation and palpation of, for verifying endotracheal position, 816
 for verifying tracheal tube insertion depth, 833
- Chest radiography, for verifying endotracheal position, 830
 tracheal tube insertion depth, 834
- Cholecystectomy, outpatient laparoscopic, 36, 116-118
- Chronic obstructive pulmonary disease, one-lung ventilation and, 442-443
 in patients undergoing pulmonary resection, 421-424
- Circulatory changes, regional, in laparoscopy, 6-9
- Circulatory stagnant hypoxia, 781-782
- Citrate intoxication, as complication of massive transfusion, 644-645
- Clonidine, for prophylaxis of myocardial ischemia, 655
- CO₂ absorption, as cardiovascular effect during laparoscopy, 5
- Coagulopathies, combined dilutional and consumptive, treatment of, 644
 complex, as complication of massive transfusion, 642-643

- consumptive, as complication of massive transfusion, 640
- dilutional, as complication of massive transfusion, 639-640
- diagnosis and treatment of, 641-642
- transfusion-related, diagnosis and treatment of, 641
- CO₂ insufflation, advantages and disadvantages of, for pediatric laparoscopy, 71-72
- complications from, in thoracoscopy, 192
- for pediatric thoracoscopy, 182-184
- Colon resection, laparoscopic, 114-115
- Colorimetric end-tidal carbon dioxide detection, for verifying endotracheal position, 824-825
- Combined spinal-epidural anesthesia (CSEA), for laparoscopy, 48-49
- Complete heart block, as pediatric cardiac emergency, anesthetic management, 297-298
- cause, 296-297
- clinical presentation, 297
- Complex coagulopathies, as complication of massive transfusion, 642-643
- Computed tomography, for diagnosis of hydrocephalus, 210-211
- Congenital cardiac lesions, as pediatric cardiac emergency, 287-288
- anesthetic management, 291-292
- indications for emergency cardiac catheterization, 288-291
- Congenital diaphragmatic hernia, as neonatal surgical emergency, 268-271
- anesthetic management, 271-274
- Congestive heart failure, as pediatric cardiac emergency, anesthetic management, 304
- cause, 301-302
- clinical presentation, 302-303
- medical management, 303-304
- Consumptive coagulopathies, as complication of massive transfusion, 640
- Continuous positive airway pressure, to nondependent lung, in one-lung ventilation, 482-484
- Coronary artery bypass surgery, interventions based on transesophageal echocardiography during, 660-661
- Coronary artery disease, transesophageal echocardiographic assessment of, 756-758
- Corticosteroids, for secondary treatment of anaphylaxis, 713
- Cranial dysraphism. *See Neural tube defects.*
- Croup, 245-246
- treatment, 246-249
- airway support, 248-249
- Cuff maneuvers and neck palpation, for verifying, endotracheal position, 818
- tracheal tube insertion depth, 833
- Cyanide toxicity, hypoxia from, 783-784
- diagnosis and treatment of, 796-797
- Dantrolene, for malignant hyperthermia syndrome, 373-374
- Desaturation, prediction of, during one-lung ventilation for thoracic surgery, 427-429
- Desflurane, for airway surgery, 503
- Dexmedetomidine, for prophylaxis of myocardial ischemia, 655
- Dextran, as fluid distention medium for hysteroscopy, 131-132
- Diastolic dysfunction, as early marker of myocardial ischemia, 663-664
- Difficult airways, lung isolation in patients with, 470
- Univent tubes and, 471-472
- Diffusion limitation, as cause of hypoxia, 777
- diagnosis of, 792
- Dilutional coagulopathy, as complication of massive transfusion, 639-640
- diagnosis and treatment of, 641-642
- Diphosphoglycerate, decreases in, as complication of massive transfusion, 645
- Disaggregation phenomenon, post-thoracotomy analgesia for, 621-622
- DO₂, for assessing adequacy of oxygen delivery in massively bleeding patient, 636
- Dobutamine, for secondary treatment of anaphylaxis, 712
- Dopamine, for improving outcome after oliguria, 873-874
- for secondary treatment of anaphylaxis, 712
- Doppler ultrasonography, transcranial, for diagnosis of hydrocephalus, 211-212
- as measure of brain hypoxia and ischemia, 806
- for monitoring air embolism, 690
- transthoracic, for monitoring air embolism, 687-688
- Double-lumen tracheal tubes, for thoracoscopy, 163-164, 189-191
- Down lung syndrome, as complication of thoracoscopy, 195
- Duodenal obstruction, as neonatal surgical emergency, 279
- Dysrhythmias, from laparoscopy, 93

- Echocardiography, transesophageal. See *Transesophageal echocardiographic examination*; *Transesophageal echocardiography*.
- Edema, pulmonary. See *Pulmonary edema*.
- Edrophonium, for reversing neuromuscular blockade, 918, 919, 920
- Ejection fraction, as late marker of ischemia, 665-666
- Electrocardiography, for monitoring, air embolism, 690
cardiopulmonary resuscitation, 718-719
myocardial ischemia, 656-658
- Electroencephalography, as measure of brain hypoxia and ischemia, 806-807
- Embolism, air and gas, cause, 685-686
intraoperative monitoring strategy, 690-691
monitoring and diagnosis, 686-690
amniotic fluid, 696-698
fat, clinical presentation, 691-694
intraoperative monitoring, 694-696
pulmonary. See *Pulmonary embolism*.
- Emphysema treatment, combined with lung cancer surgery, 423
lung volume reduction surgery for, 592-594
present state of, 592
- Endobronchial intubation, difficult, in pulmonary resection, 427
- Endobronchial tubes, double-lumen, in one-lung ventilation, 478-480
- Endometriosis, pain mapping for, 50
- Endoscopy, fetal, 85
- Endosuites, 119
- Endothelin-1 inhibitors, for improving outcome after oliguria, 875-876
- Endotracheal position, verification of, 813-839
methods of, 814-815
acoustic reflectometry, 829-830
auscultation of breath sounds, 816
Beck Airway Air Flow Monitor, 829
chest radiography, 830
combined auscultation of epigastrium and axillae, 817
cuff maneuvers and neck palpation, 818
direct visualization of tracheal tube between cords, 815
epigastric auscultation and observation for abdominal distension, 817
esophageal detector device/self-inflating bulb, 825-829
identification of carbon dioxide in exhaled gas, 821-825
observation and palpation of chest movements, 816
pulse oximetry, 820-821
reservoir bag compliance and refilling, 817-818
reservoir bag movements during spontaneous breathing, 818
sound of expelled gases during sternal compression, 818-819
transtracheal illumination, 820
tube condensation of water vapor, 819
use of flexible fiberoptic bronchoscopes, 819-820
verification of tracheal tube insertion depth, 830-831
methods of, capnography, 834
chest radiography, 834
cuff maneuvers and neck palpation, 833
direct visualization of tube and its cuff, 831-832
limiting excessive movement of tube, 832-833
observation and palpation of chest movements and auscultation of breath sounds, 833
referencing marks on tube before and after intubation, 831
self-inflating bulb, 834
transtracheal illumination, 833-834
use of fiberoptic scopes, 833
- Endotracheal tubes, double-lumen, for lung isolation, 455-456
complications from, 465-466
tracheostomies and, 465
tube exchanger guidewire for, 470-471
left-sided double-lumen, for lung isolation, choosing proper size, 456-457
placement and positioning, 457-462
pathology caused by, in one-lung ventilation, 440-442
right-sided double-lumen, for lung isolation, 463-464
placement and positioning, 464-465
single-lumen, with enclosed bronchial blocker (Univent), 466-468
with wire-guided endobronchial blocker, placement and positioning, 468-469
- End-stage lung disease, thoracic surgery for patients with, choice of anesthetic drugs, 582-583
early postoperative management, 587-588
general issues, 587
mechanical ventilation, 583-587
preoperative evaluation, 582
role of bispectral index monitoring, 583

- End-tidal carbon monoxide monitoring, during cardiopulmonary resuscitation, 723-724
- End-tidal nitrogen, for monitoring air embolism, 688-689
- Enflurane, during one-lung ventilation, 487
- Epidural anesthesia, for laparoscopy, 48
- Epidural block, for post-thoracotomy analgesia, 618
- Epigastric auscultation, for verifying endotracheal position, 817
- Epiglottitis, acute, clinical presentation, 242
- diagnosis, 242-243
- principles of management, 243-245
- Epinephrine, for pediatric resuscitation outside operating room, 393-394
- for treatment of anaphylaxis, 711, 712
- Esmolol, for airway surgery, 503
- Esophageal atresia and tracheoesophageal fistula, as neonatal surgical emergency, 274-275
- anesthetic management, 275-276
- Esophageal detector device/self-inflating bulb, for verifying endotracheal position, 825-829
- Extracorporeal membrane oxygenation, for pediatric respiratory failure, 403
- Extraperitoneal insufflation, inadvertent, as complication of laparoscopy, 91-92
- Eye emergencies, pediatric, 257-264
- anesthetic management, 262-263
- clinical presentation, 261
- diagnosis, 260
- intraocular pressure, 259-260
- monitoring, 262
- ocular trauma, 257-258
- postoperative care, 263
- premedication, 261-262
- preoperative evaluation, 260-261
- terminology, 258
- types of injuries, 258-259
- Face mask, during thoracoscopy, 150
- Fat embolism, clinical presentation, 691-694
- intraoperative monitoring, 694-696
- Fentanyl, for airway surgery, 503
- Fetal endoscopy, 85
- Fiberoptic bronchoscopy, anesthetic techniques, general anesthesia, 512-514
- topical anesthesia with conscious sedation, 511-512
- for confirming double-lumen endotracheal tube placement, 462-463
- patient characteristics and physiologic effects, 510-511
- for Univent placement, 467
- for verifying, endotracheal position, 819-820
- tracheal tube insertion depth, 833
- Flow-volume loops, in preoperative assessment for pulmonary resection, 418
- Fluid distention media, for hysteroscopy, 127-133
- dextran, 131-132
- glycine, 128-131
- physiologic media, 132-133
- sorbitol and mannitol, 131
- Fluid overload, from hysteroscopy, 134
- Fogarty catheter, as bronchial blocker, for lung isolation, 469-470
- Foreign body removal from airway, anesthesia for, 523
- Fundoscopic examination, for diagnosis of hydrocephalus, 210
- Furosemide, for improving outcome after oliguria, 874-875
- Gamete intrafallopian transfer (GIFT), performed under regional anesthesia, 50-51
- Gas embolism. See *Air and gas embolism*. from laparoscopy, 96-98
- Gaseous distention, for hysteroscopy, 126-127
- Gastric intramucosal pH, for assessing adequacy of oxygen delivery in massively bleeding patient, 636-637
- Gastric tonometry, for monitoring splanchnic system, 808
- Gastroesophageal reflux disease, Nissen fundoplication for, 110
- Gastrointestinal injuries, from laparoscopy, 99
- Gastroschisis, anesthetic management, 277-278
- as neonatal surgical emergency, 277
- Glycine, as fluid distention medium for hysteroscopy, 128-131
- Graft vs. host disease, from blood transfusion, 347
- Gravity, influencing blood flow distribution during one-lung ventilation, 439-440
- Head trauma, pediatric, anesthetic management, 319-323
- evaluation, 317-318
- general management, 318-319
- overview, 316
- Heart block, complete. See *Complete heart block*.

- Heart sounds, for monitoring air embolism, 690
- Hematocrit, for assessing adequacy of oxygen delivery in massively bleeding patient, 634-635
- Hemodynamic abnormalities, as cause of myocardial ischemia, 651-652
- Hemodynamic changes, during one-lung ventilation, for thoracoscopy, 144, 146 during two-lung ventilation, for thoracoscopy, 148-149
- Hemodynamic complications, from laparoscopy, 92-94
- Hemolytic reactions, to blood transfusion, 344
- Hemorrhage, from hysteroscopy, 134
- Heparin, for treatment of pulmonary thromboembolism, 683, 684, 685
- Hernia, congenital diaphragmatic, as neonatal surgical emergency, 268-271 inguinal, laparoscopic repair of, 110-113
- High-frequency jet ventilation, in airway surgery, 500-501, 506-507, 529-531 in children, 401-402 in one-lung ventilation, 484
- High-frequency oscillation, in airway surgery, 502, 507-509
- High-frequency oscillatory ventilation, in children, 400-401
- High-frequency positive pressure ventilation, in airway surgery, 501-502, 507
- Histocytic hypoxia, 782-784 treatment of, 794-797
- Horner's syndrome, as complication of thoracoscopy, 195
- Hydrocephalus, 207-218 causes, 207-209 diagnosis, with, computed tomography, 210-211 fundoscopic examination, 210 lumbar puncture, 210 magnetic resonance imaging, 211 ophthalmodynamometry, 211 transcranial Doppler, 211-212 perioperative anesthesia management, 214-215 anesthesia, 214-215 premedication, 214 postoperative care, 215 presentation, 209-210 shunting for, 212-214 treatment modalities, 212
- Hyperbaric oxygenation, for ventilation in airway surgery, 531
- Hypercapnia, as complication of laparoscopy, 94-95 during one-lung ventilation, for thoracoscopy, 144 during two-lung ventilation, for thoracoscopy, 147-148
- Hyperkalemia, from blood transfusion, 345 as complication of massive transfusion, 645-646 intraoperative coagulopathy and, 355-356
- Hypocalcemia, from blood transfusion, 345, 347
- Hyponatremia, from hysteroscopy, 134
- Hypotension, intraoperative coagulopathy and, 358-359
- Hypothermia, from blood transfusion, 344-345 as complication of massive transfusion, 640-641 intraoperative, in patients with end-stage lung disease, 587
- Hypoventilation, as cause of hypoxia, 773-774 diagnosis of, 790-791
- Hypoxemia, as complication of laparoscopy, 94 during one-lung ventilation, for thoracoscopy, 142-144, 145
- Hypoxia, perioperative, 769-812 arterial and venous blood gas monitoring, 798 causes of, anemic hypoxia, 778-781 circulatory stagnant hypoxia, 781-782 environmental and pulmonary-related, 770-778 histocytic hypoxia, 782-784 clinical monitoring of skin and tissues, 798 diagnosis and treatment, 789 for anemia-related causes, 793-794 brief review, based on clinical environment, 797 for environmental and pulmonary-related causes, 790-793 for histocytic causes, 794-797 for impaired cardiac output as cause, 794 measurement of global vs. specific organ oxygenation, 804-808 physiologic compensatory responses to, cardiovascular, 786 neurologic, 784-786 pulmonary, 786-789 pulse oximetry for detecting, 798-799 dyshemoglobin-related artifacts, 802-803 functional vs. fractional saturation, 799-801 general principles, 799 miscellaneous additional artifacts, 803-804 physical limitations, 801-802 Hypoxic pulmonary vasoconstriction, factors influencing, 436-438

- in one-lung ventilation, 485-486
 - potentiators of, in one-lung ventilation, 489-490
 - Hysteroscopy, anesthesia for, 125-140
 - for diagnostic hysteroscopy, 135
 - for surgical hysteroscopy, 135-137
 - complications of, cervical trauma, 134
 - fluid overload and hyponatremia, 134
 - hemorrhage, 134
 - infection, 134
 - procedural issues leading to, 133
 - uterine perforation, 134
 - surgical procedure, fluid distention media, 127-133
 - dextran, 131-132
 - glycine, 128-131
 - physiologic media, 132-133
 - sorbitol and mannitol, 131
 - gaseous distention, 126-127
- Immune response, to laparoscopy, 12-13
- Immunosuppression, from blood transfusion, 344
- Imperforate anus, as neonatal surgical emergency, 280
- Indwelling arterial catheter, for monitoring cardiopulmonary resuscitation, 722-723
- Infection, from hysteroscopy, 134
- from thoracoscopy, 195
- Inguinal block, for laparoscopy, 46-47
- Inguinal hernia, laparoscopic repair of, 110-113
- Inhaled vs. intravenous anesthetics, during one-lung ventilation, 486-489
- Inspired oxygen fraction, in one-lung ventilation, 480
- Intercostal nerve block, for post-thoracotomy analgesia, 617
- Intermittent positive pressure ventilation, for tracheal resection and reconstruction, 527-529
- Interpleural local anesthetics, for post-thoracotomy analgesia, 617
- Intestinal obstruction, as neonatal surgical emergency, 279-281
- Intra-abdominal pressure, in pediatric laparoscopy, cardiovascular effects, 72-74
 - endocrinologic effects, 76-77
 - neurologic effects, 76
 - respiratory effects, 74-76
- Intraocular pressure, pediatric eye emergencies and, 259-260
- Intrathoracic intercostal nerve blocks, complications of, from thoracoscopy, 193-194
- Intravenous anesthetics, vs. inhaled anesthetics, during one-lung ventilation, 486-489
- in renal failure patients, 851-853
- Invasive arterial blood pressure monitoring, during cardiopulmonary resuscitation, 722-723
- for measuring renal perfusion, 867-868
- Ischemia, in patients undergoing pulmonary resection, 420
- Ischemic cascade, myocardial ischemia and, 653
- Isoproterenol, for secondary treatment of anaphylaxis, 712
- Jejunioileal atresia, as neonatal surgical emergency, 279
- Jugular venous saturation monitoring, as measure of brain hypoxia and ischemia, 807-808
- Ketamine, during one-lung ventilation, 487
- Labor, preterm, prevention of, from laparoscopy during pregnancy, 60
- Laparoscopy, anesthesia for, with emphasis on outpatient laparoscopy, 21-41
 - anesthetic challenges, 22-23
 - choice of anesthetic technique, 24
 - controlled or spontaneous ventilation, 35
 - controversies, 33
 - laryngeal mask airway used in, 33-35
 - microlaparoscopy in the office setting, 27
 - neuromuscular blocking drugs, 25-26
 - nitrous oxide, 25
 - other anesthetic techniques, 27
 - outpatient laparoscopic cholecystectomy, 36
 - physiologic changes, 23-24
 - postoperative morbidity, 27-28
 - postoperative nausea and vomiting, 32-33
 - postoperative pain management, local anesthesia, 28-29
 - multimodal analgesia techniques, 30-31
 - nonsteroidal anti-inflammatory drugs, 29-30
 - opioids, 30
 - other analgesic techniques, 31
 - surgical technique, 31-32
- in pediatric patient, 69-88
- clinical experience in, 84

Laparoscopy (*Continued*)

- complications, 85
- fetal endoscopy, 85
- immediate postoperative care, 82
- overview of, 69-70
- perioperative management,
 - induction of anesthesia, 78
 - laryngeal mask airway, 80-82
 - monitoring, 78-79
 - perioperative care, 79-80
 - premedication, 77-78
 - preoperative evaluation, 77
 - preoperative investigations, 77
- physiologic changes during,
 - creation of pneumoperitoneum,
 - advantages and disadvantages of CO₂ for insufflation, 71-72
 - gasless laparoscopy, 72
 - other gases for pneumoperitoneum, 72
- intra-abdominal pressure,
 - cardiovascular effects, 72-74
 - endocrinologic effects, 76-77
 - neurologic effects, 76
 - respiratory effects, 74-76
- postoperative nausea and vomiting, 83-84
- postoperative pain management, 82-83
- complications of, 89-105
 - cardiovascular, 92-94
 - gas embolism, 96-98
 - gastrointestinal injuries, 99
 - inadvertent extraperitoneal insufflation, 91-92
 - perioperative, incidence of, 90-91
 - pneumothorax, pneumomediastinum, and pneumopericardium, 95-96
 - postoperative, 100-101
 - pulmonary, 94-95
 - urinary tract injuries, 100
 - vascular injuries, 98-99
- contraindications to, 107
- diagnostic, performed under regional anesthesia, 49-50
- gasless, 13, 72
- patient population for, 2
- physiologic changes during, 1-19
 - cardiovascular effects of pneumoperitoneum, 2-6
 - CO₂ absorption, 5
 - mechanical effects of pneumoperitoneum, 4
 - neurohormonal response, 5-6
 - patient position, 4-5
 - immune response, 12-13
 - regional circulatory changes, cerebral changes, 6-7
 - gastrointestinal changes, 7-8
 - hepatoportal changes, 7
 - lower limb changes, 8-9
 - renal changes, 8
 - respiratory effects of pneumoperitoneum, gas exchange, 9-10
 - lung mechanics, 11
 - postoperative pulmonary changes, 11-12
- during pregnancy, 57-67
 - alternatives to pneumoperitoneum, 64
 - vs. conventional surgery, 61-62
 - fetal issues, 58-60
 - maternal issues, 58
 - monitoring considerations, 62-64
 - physiologic effects of pneumoperitoneum in the parturient, 60-61
 - prevention of preterm labor, 60
 - timing of surgery, 64
- procedures performed with, 1-2, 21-22, 108
- regional anesthesia for, 43-55
 - advantages and disadvantages of regional/local anesthesia, 44
 - local anesthesia techniques, caudal epidural block, 49
 - combined spinal-epidural anesthesia (CSEA), 48-49
 - epidural anesthesia, 48
 - inguinal block, 46-47
 - rectus sheath block, 46
 - spinal anesthesia, 47-48
- physiologic considerations for laparoscopy in an awake patient, 44-45
- recovery and discharge after, 52
- safety and patient satisfaction, 52
- surgical procedures performed under regional anesthesia, diagnostic laparoscopy, 49-50
 - gamete transfer, 50-51
 - laparoscopic tubal ligation, 51
 - pain mapping, 50
- surgical aspects and future developments of, 107-124
 - adrenalectomy and nephrectomy, 109
 - ambulatory laparoscopy, 116-119
 - colon resection, 114-115
 - gastroesophageal reflux disease, 110
 - inguinal hernia, 110-113
 - investigational procedures, 115-116
 - morbid obesity, 113
 - operating room of the future, 119-120
- Laryngeal mask airway, for laparoscopy, 33-35
 - in pediatric patient, 80-82
 - for thoracoscopy, 150
- Laryngeal trauma, in children, 254
- Laryngobronchoscopy, anesthesia for,
 - patient positioning and monitoring, 509-510

- Laryngoscopy, direct, anesthetic and ventilation techniques, 519-521
 patient characteristics and physiologic effects, 519
 suspension, laser resection by way of, 521-523
- Laser resection by way of suspension
 laryngoscopy or bronchoscopy, 521-523
- Lateral decubitus position, physiology of, in thoracoscopy, 146
- Lavage, whole lung. *See Whole lung lavage.*
- Left atrial appendage, examined with transesophageal echocardiography, 734-735
- Left atrium, examined with transesophageal echocardiography, 734-735
- Left ventricle, examining with transesophageal echocardiography, 740
- Liver disease, intraoperative coagulopathy with, 354
- Local anesthesia, for laparoscopy, 46-49
 postoperative pain with, 28-29
 for pediatric thoracoscopy, 176-177
- Low-frequency jet ventilation, in airway surgery, 498-499, 529
- Lumbar puncture, for diagnosis of hydrocephalus, 210
- Lung cancer, assessment, 425
 surgery, combined with emphysema surgery, 423
- Lung herniation through chest wall, as complication of thoracoscopy, 196-197
- Lung isolation techniques, 455-474
 auscultation vs. fiberoptic bronchoscopy, 462-463
 double-lumen endotracheal tubes, 455-456
 complications from, 465-466
 tracheostomies and, 465
- Fogarty catheter as bronchial blocker, 469-470
- left-sided double-lumen endotracheal tubes, choosing proper size, 456-457
 placement and positioning, 457-462
 in patients with difficult airways, 470
 right-sided double-lumen endotracheal tubes, 463-464
 placement and positioning, 464-465
- single-lumen endotracheal tube with wire-guided endobronchial blocker, 468-469
- single-lumen tube with enclosed bronchial blocker (Univent), 466
 choosing proper size of Univent tube, 466
 complications from, 468
 fiberoptic bronchoscopy for Univents, 467
 placement and positioning of Univent tubes, 467
 selective lobar blockade, 467-468
 tube exchanger guidewire for double-lumen endotracheal tubes, 470-471
 Univent tubes and difficult airways, 471-472
- Lung parenchymal function, in prethoracotomy respiratory assessment, 416
- Lung-sparing surgery, 413-417
 assessment of respiratory function for, cardiopulmonary interaction, 416-417
 lung parenchymal function, 416
 respiratory mechanics, 414-416
 major respiratory complications from, 414
- Lung transplantation, lessons from, for everyday thoracic anesthesia, 581-590
 choice of anesthetic drugs, 582-583
 early postoperative management, 587-588
 general issues, 587
 mechanical ventilation, 583-587
 preoperative evaluation, 582
 role of bispectral index monitoring, 583
- Lung volume reduction surgery, anesthesia considerations for, 591-609
 general anesthesia, drugs, 605
 mechanical ventilation, 605-606
 monitoring, 605
 patient warming, 606
 thoracic epidural analgesia, 604
 changes in diaphragmatic function after, 597-598
 changes in lung function testing and ventilatory mechanics after, 595-596
 early extubation after, 606
 for emphysema, 592-594
 mechanisms of functional improvement after, 594
 optimal conduct of, patient selection, functional criteria, 600-601
 general criteria, 598-599
 morphologic criteria, 599-600
 preoperative patient preparation, pharmacologic, 601
 preoperative exercise program, 601-602
 psychologic preparation, 602, 604
 present state of emphysema treatment, 592
- Magnetic resonance imaging, for diagnosis of hydrocephalus, 211

- Malignant disease dissemination, as complication of thoracoscopy, 195-196
- Malignant hyperthermia syndrome, 367-382
- clinical presentation, 367-369
 - clinical therapy after dantrolene, 373-374
 - counseling by anesthesiologist on, 376-378
 - principles for diagnosing, difference between hyperthermia and fever, 369
 - difference between masseter spasm and masseter spasm after succinylcholine use, 370-371
 - importance of respiratory and metabolic acidosis, 371-372
 - normal timeframe of attacks, 372
 - presence of rigidity or hyperthermia, 372-373
 - testing for, 375-376
- Malrotation and volvulus, as neonatal surgical emergency, 280
- Mannitol, as fluid distention medium for hysteroscopy, 131
- for improving outcome after oliguria, 874
- Masseter spasm, true, vs. masseter spasm from succinylcholine use, 370-371
- Massively bleeding patient, 633-649
- assessing adequacy of oxygen delivery, 633-638
 - DO_2 , VO_2 , and gastric intramucosal pH, 636-637
 - pH, serum lactate, and mixed venous oxygen saturation, 635-636
 - red blood cell transfusion trigger, 637-638
 - vital signs, hematocrit, and central pressures, 634-635
 - complications of massive transfusion, 638-647
 - acid-base changes, 645
 - citrate intoxication, 644-645
 - combined dilutional and consumptive coagulopathy, treatment of, 644
 - complex coagulopathies, 642-643
 - consumptive coagulopathy, 640
 - decreases in 2,3-diphosphoglycerate, 645
 - dilutional coagulopathy, 639-640
 - diagnosis and treatment of, 641-642
 - hyperkalemia, 645-646
 - hypothermia, 640-641
 - microaggregate delivery, 646-647
 - volume overload, 646
- Mechanical ventilation, for lung volume reduction surgery, 605-606
- in thoracic surgery for end-stage lung disease, 583-587
- Meconium ileus, as neonatal surgical emergency, 280
- Mediastinal mass, adverse event reporting, 575
- anesthesia for patients with, 559-579
 - induction and intubation, 570-571
 - in myasthenia gravis, 574-575
 - tracheal resection, 572-573
 - tracheal stenting, 571-572
 - ventilation, 571
 - history, 559-560
 - pathology, 562-563
 - preoperative evaluation, diagnosis by radiologic techniques, 566-567
 - respiratory function tests, 567-569
 - right heart and pulmonary vascular compression, 564-565
 - in right heart and pulmonary vascular compression, anesthetic management of, 574
 - superior vena cava syndrome, 563-564
 - anesthetic management of, 573
 - symptoms and signs, 563
 - thymic tumors, 565-566
- Mediastinum, anatomy, anterosuperior mediastinum, 560-561
- posterior mediastinum, 561-562
 - visceral or middle mediastinum, 561
- Methemoglobin, as artifact of pulse oximetry, 802
- Microaggregate delivery, as complication of massive transfusion, 646-647
- Microlaparoscopy in office setting, 27
- Milrinone, for secondary treatment of anaphylaxis, 713
- Minimally invasive surgery, anesthesia for, issue on, 1-205
- Mitral valve, examining with transesophageal echocardiography, 737-740
- Mivacurium, for airway surgery, 504
- Mixed venous oxygen saturation, for assessing adequacy of oxygen delivery in massively bleeding patient, 636
- Monitoring during critical events, anaphylaxis, 705-715
- arterial blood gas and pH analysis, 885-912
 - bispectral index monitoring, 947-966
 - cardiac arrest and monitoring, 717-726
 - issue on, 633-987
 - massively bleeding patient, 633-649
 - monitoring for suspected pulmonary embolus, 673-703
 - myocardial ischemia, 651-672
 - neuromuscular blockade, 913-922
 - oliguria, 841-883
 - performing complete transesophageal echocardiographic examination, 727-767
 - perioperative hypoxia, 769-812
 - spinal cord monitoring with evoked potentials, 923-945

- verification of endotracheal position, 813-839
- Motor-evoked potentials, modalities to monitor, 927-930
 - myogenic, application of, after transcranial electrical stimulation, 930-931
 - for spinal cord monitoring, 933-934
- Multimodal analgesia techniques, for postoperative pain from laparoscopy, 30-31
- Myasthenia gravis, anesthetic management for, 574-575
- Myelomeningocele. *See Neural tube defects.*
- Myocardial ischemia, 651-672
 - interventions terminating, 666-668
 - intraoperative electrocardiographic monitoring of, diagnostic methods, 656-657
 - indications, 656
 - significance of ST deviation during noncardiac surgery, 657-658
 - perioperative, significance of, choice of monitors, 653-654
 - hemodynamic abnormalities as cause of, 651-652
 - ischemic cascade, 653
 - other causes of, 652-653
 - pharmacologic prophylaxis of ischemia, 654-655
 - pulmonary artery catheter monitoring of, indications, 658-659
 - methods of diagnosis, 659-660
 - preoperative optimization of measurements, 659
 - transesophageal echocardiography monitoring for, indications in noncardiac and cardiac surgery, 660-661
 - methods of diagnosis, 661-666
- Nausea and vomiting, postoperative, from laparoscopy, 32-33
 - in pediatric patient, 83-84
- Necrotizing enterocolitis, as neonatal surgical emergency, 278
 - anesthetic management, 278-279
- Negative-pressure pulmonary edema, in children, 384-385
- Neonatal surgical emergencies, congenital diaphragmatic hernia, 268-271
 - anesthetic management, 271-274
- esophageal atresia and tracheoesophageal fistula, 274-275
 - anesthetic management, 275-276
- intestinal obstruction, duodenal obstruction, 279
 - imperforate anus, 280
 - anesthetic management, 280-281
 - jejunoileal atresia, 279
 - malrotation and volvulus, 280
 - meconium ileus, 280
- necrotizing enterocolitis, 278
 - anesthetic management, 278-279
- omphalocele and gastroschisis, 276-277
 - anesthetic management, 277-278
- pyloric stenosis, 265-266
 - anesthetic management, 266-268
- Neostigmine, for reversing neuromuscular blockade, 918, 919, 920
- Nephrectomy, laparoscopic, 109
- Nerve blocks, intrathoracic intercostal, complications of, from thoracoscopy, 193-194
- Neural tube defects, 219-228
 - associated anomalies, 220-221
 - cause, 219-220
 - clinical presentation, 221
 - diagnosis, 221-222
 - management, early maternal, 222
 - postnatal, management of anesthesia, 224-225
 - postoperative care, 226
 - preoperative evaluation, 223
 - preparation for surgery, 224
 - prenatal, 222-223
- Neuroanesthesia, pediatric, arteriovenous malformations. *See Arteriovenous malformations.*
 - hydrocephalus. *See Hydrocephalus.*

- Neurogenic pulmonary edema, in children, 385-386
- Neuromuscular blockade, 913-922
 - assessment of, clinical evaluation, 916
 - evoked responses to nerve stimulation, 916-917
 - recurarization, 917-918
 - pharmacologic reversal of, choice and dose of agents, 920
 - factors affecting, 918-920
 - mechanism of action, 918
 - neostigmine block, 918
 - pharmacodynamics, 918
 - in renal failure patients, 856
 - residual, 914-916
- Neuromuscular blocking drugs, for laparoscopy, 25-26
- Nicardipine, for prophylaxis of myocardial ischemia, 655
- Nissen fundoplication, for gastroesophageal reflux disease, 110
- Nitric oxide, inhalation, for pediatric respiratory failure, 402
 - and one-lung ventilation, 490-492
- Nitroglycerin, for treating myocardial ischemia, 655
- Nitrous oxide, for laparoscopy, 25
 - in renal failure patients, 855-856

- Nocturnal hypoxemia, with chronic obstructive pulmonary disease, 422
- Nonsteroidal anti-inflammatory drugs (NSAIDs), for postoperative pain from laparoscopy, 29-30
- for post-thoracotomy analgesia, 620-621
- Norepinephrine, for pediatric resuscitation outside operating room, 394
- for secondary treatment of anaphylaxis, 712
- Obesity, morbid, laparoscopy and, 113
- Obstructive laryngeal papillomatosis, 249-250
- anesthetic management, 250-252
- Ocular trauma. *See Eye emergencies, pediatric.*
- Oliguria, 841-883

- Volume overload, as complication of massive transfusion, 646
- V/Q mismatch, as cause of hypoxia, 774-776
 diagnosis of, 791
- Warfarin, for treatment of pulmonary thromboembolism, 684
- Whole lung lavage, **543-558**
 author's experience with, 553-555
 evolution after, 553
 historical considerations, 543-544, 545, 546
 indications, 544
 pediatric, 555-556
 pre-evaluation for, 544
 technique, complications from, desaturation, 549
 leakage, 549-550
 general anesthesia, 547
 lung lavage, 547, 549
 lung separation, 547
 monitoring, 546-547
 termination, 550, 552-553
- Zygote intrafallopian transfer (ZIFT), performed under regional anesthesia, 50-51
